9th Annual Consulting Electrical Engineers Technical Forum & Tradeshow - May 7, 2012, Union League Club of Chicago

The annual CEE Technical Forum & Tradeshow is Monday, May 7th at the Union League Club of Chicago. Now commemorating its 9th year, this event brings together electrical engineers, specifiers, designers, contractors and decision makers representing Chicagoland's top engineering and design firms.

This year's technical forum will feature a presentation on Building Information Modeling (BIM).

CADworks will provide an in-depth look on the value of operating in a Building Information Modeling (BIM) environment, specific to Electrical Engineering and Contracting, as well as describe how the implementation and advanced use of BIM combines powerful new software design tools with emerging Integrated Project Delivery (IPD) methods to deliver our projects better and faster than ever. BIM facilitates the sharing of information among owners, architects, engineers, interior designers, contractors, facility managers and other team members throughout a building's life cycle. Because each team member can access and share the same data, BIM binds design and construction teams together into a unified entity focused on the client's best interests.

Engineers, designers, CAD professionals, specifiers and others interested in attending this event can learn more and register online at www.eachicago.org. Each attendee receives two professional development hours towards their license renewal. Additionally, participants are eligible to win dozens of great raffle prizes such as gift cards, sporting event tickets, electronics and more. Each attendee that visits twenty exhibits in the tradeshow will be entered into a special drawing for a flatscreen TV.
